

Adding a Shipping Class

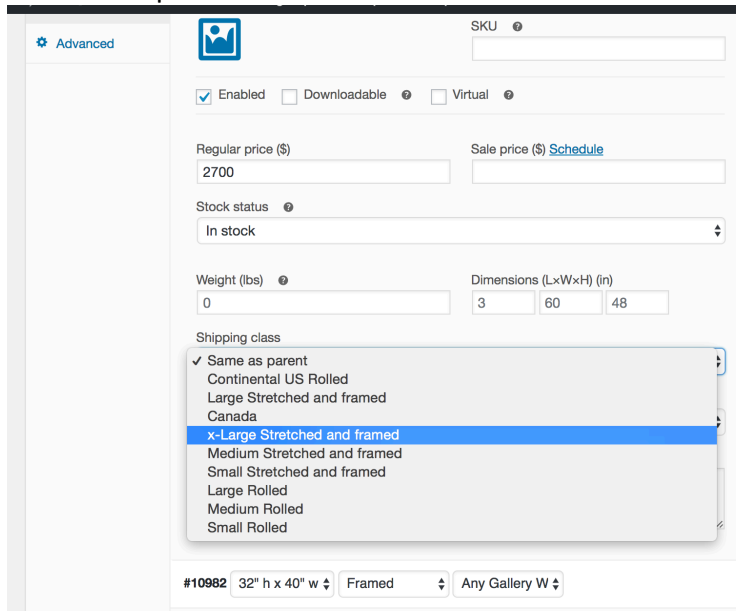

This allows you to create a new rule for shipping. An example is if we want to charge an amount for rolled canvas that is medium. In this case I will assign a name “slug” will be used to help identify the class. I added the sizes effected to make management of the classes easier to find and edit.

The screenshot shows a shipping class management interface. At the top, there are three tabs: "x-Large Stretched and framed", "framed-x-large", and "Stretched and framed (\$275) 48x48, 48x60". The "Stretched and framed" tab is active, showing a count of "1". Below the tabs, there are three input fields: "Medium Rolled", "rolled-medium" (highlighted with a blue border), and "Rolled (\$60) 36x36, 40x30". At the bottom, there are two buttons: "Save Shipping Classes" (blue) and "Add Shipping Class" (grey).

Adding Shipping Class to Product Variation

Each product variation has its own shipping class. Meaning an oversized print in a Frame costs more to ship than the Rolled version.

The screenshot shows the product variation configuration interface. It includes a sidebar with "Advanced" settings, a product image, and a SKU field. The "Enabled" checkbox is checked, while "Downloadable" and "Virtual" are unchecked. The "Regular price (\$)" is set to "2700" and the "Sale price (\$)" is empty with a "Schedule" link. The "Stock status" is "In stock". The "Weight (lbs)" is "0" and the "Dimensions (LxWxH) (in)" are "3", "60", and "48". The "Shipping class" dropdown menu is open, showing options: "Same as parent" (checked), "Continental US Rolled", "Large Stretched and framed", "Canada", "x-Large Stretched and framed" (highlighted in blue), "Medium Stretched and framed", "Small Stretched and framed", "Large Rolled", "Medium Rolled", and "Small Rolled". At the bottom, there are dropdown menus for "#10982", "32" h x 40" w", "Framed", and "Any Gallery W".
